ABSTRACT

This report presents a variety of statistical and financial data on Colorado's public schools, as required by the Colorado School Laws, Chapter 123-1-13(1). This volume is the 1973 edition of the report, which presents data up through the 1971-72 school year. Included in the report are (1) a series of graphs summarizing significant statewide data for the period 1962-63 through 1971-72, (2) individual one-page statistical profiles that present basic data for each school district in the state and compare these data with state and group averages, (3) additional selected information on each school district, (4) a summary of group achievement test results for each school in the state for the years 1969-70 through 1971-72, and (5) a table summarizing financial receipts and expenditures for each school district during 1971-72. (JG)

Donald D. Woodington, *Commissioner*

March 30, 1973

Governor John A. Love
Members of the Colorado General Assembly
State Capitol Building
Denver, Colorado 80203

Dear Governor Love and Legislators:

This statistical document is presented to you by the Colorado State Board of Education in compliance with CRS 123-1-13(1), as amended.

I should like to point out that a report of this nature does not do justice to all aspects of education nor does it adequately illustrate strengths and weaknesses.

The practice of providing various school districts' profiles has been continued in this publication. In addition, state summary information illustrating 10 years of change in the varied aspects of public school operations is also included.

This year, although many school districts adhered closely to requirements to provide the department with the information included in this report, a few districts found it extremely difficult to meet the imposed deadlines. In some instances it became necessary for a member of our staff to work directly with district personnel in obtaining the required information. This has resulted in the slight delay in the completion of the document. In a very few cases, data was received too late to be included in the report.

Acting on behalf of the State Board of Education, I welcome your comments and suggestions on additional information which will add value to this report in the future and assist you in making decisions for the benefit of Colorado's children and youth.

Sincerely,

Donald D. Woodington
Donald D. Woodington
Commissioner of Education

INTRODUCTION

The Colorado Constitution provides for establishment of a free public school system and a State Board of Education to provide general supervision of this system. The education of children and youth is a major concern of any state or society. An enlightened citizen is essential for quality education programs in Colorado.

By direction of the State Board of Education, the Colorado Department of Education seeks to encourage and assist Colorado educators and citizens to improve the quality of education and insure equal educational opportunities for all. To accomplish this, the Colorado State Board of Education and Department staff bring leadership, service and supervision to all areas of the state's educational program.

Several events and happenings during 1971-72 created increased attention on education concerns. Among others they included numerous questions and considerable concern on the future of federal support for education as well as a variety of legal questions pertaining to funding responsibilities for the quality of educational opportunities. New ways for funding the schools continue to be explored by many groups and at this point it appears that some changes will result through conscientious and serious debate in the current legislative session.

This Consolidated Report is designed to show significant facts about Colorado's public schools and it contains all items called for by the Colorado School Laws, Chapter 123-1-13(1). It includes:

- Ten year graphs covering significant areas
- Comparison of 1970-71 and 1971-72 information where possible along with additional narrative analysis
- School district profiles presenting basic facts about each district and comparing these facts with state and group averages.

Although these profiles provide one way to look at the school districts, there are limitations primarily due to the significance of items selected, the difficulty of assuring comparability, and above all, the over abundance of input and process measures against the new output measures.

The profiles do not indicate how good or how bad a school district's program may be nor can any generalization be made about all districts from this information. Persons interested in determining the quality of education within a district must utilize much more information from many sources.

Those interested in additional information about this document or about education in Colorado may contact the Department of Education.

SOURCES OF REVENUE RECEIPTS (ALL FUNDS) FOR COLORADO PUBLIC SCHOOLS, 1962-63 THRU 1971-72

SOURCES OF REVENUE RECEIPTS

This graph shows the revenues received by school districts from various levels of government; federal, state, and local. Over 88.6 percent of the local revenues are derived from the local property tax. Receipts from sale of bonds, insurance adjustments, or sale of land and buildings are not included in this graph. The federal portion of revenues has increased from 5.07 percent of the total to 6.13 percent in the period shown. State revenues have moved from 22.23 percent to 27.89 percent during this same time. Substantial increases in state support have been made.

SOURCES OF REVENUE RECEIPTS (ALL FUNDS)

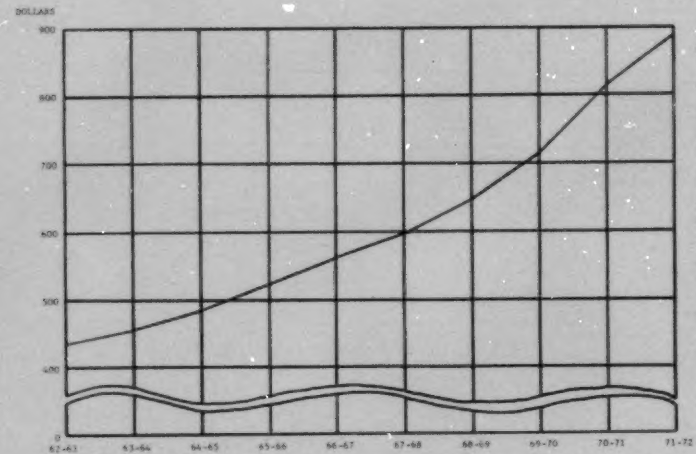
Nonoperating School Districts	21	9	3	1	1	0	0	0	0	0

OPERATING AND NONOPERATING SCHOOL DISTRICTS

As can be seen in the above graph, there are no longer any nonoperating school districts in the state. This obvious improvement is the result of reorganization in addition to dissolution and annexation. In 1935 there were 2,105 school districts in Colorado. Two legislative acts, one in 1949 and another in 1957 provided the framework for Colorado citizens to reorganize local districts. A key to Colorado's success in reducing the number of local districts was the creation of County School Planning Committees. These Committees brought together representatives of the districts to develop plans cooperatively with consultant help from the CDE for county-wide reorganization prior to conducting reorganization elections. Districts in 14 counties have not completely reorganized under the 1957 act and are still required to maintain County Planning Committees.

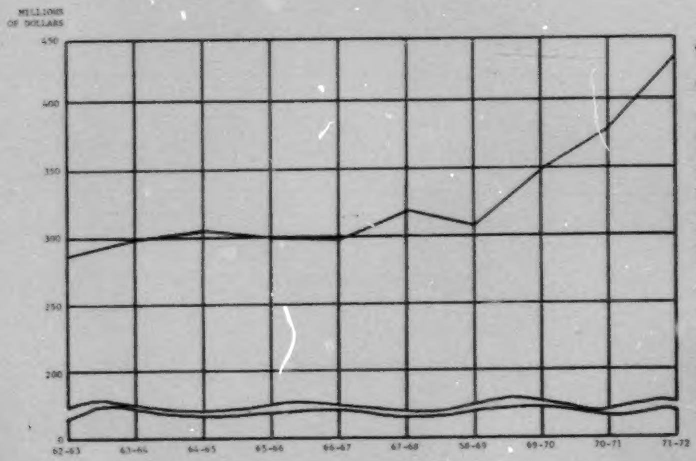
CURRENT EXPENSE PER PUPIL IN AVERAGE DAILY ATTENDANCE IN COLORADO PUBLIC SCHOOLS
1962-63 THRU 1971-72



This graph represents the current expense per pupil in average daily attendance (ADA) on a July 1 through June 30 basis. It does not include expenditures for capital outlay, debt service, and community services. The $884 expense per ADA in Colorado for 1971-72 was $86 below the estimated national average of $970 the same year. The $970 figure is for 1971-72 and was obtained from the latest National Education Association publication, Estimates of School Statistics.

1962-63	1963-64	1964-65	1965-66	1966-67	1967-68	1968-69	1969-70	1970-71	1971-72
$435	$455	$484	$523	$562	$597	$649	$713	$811	$884

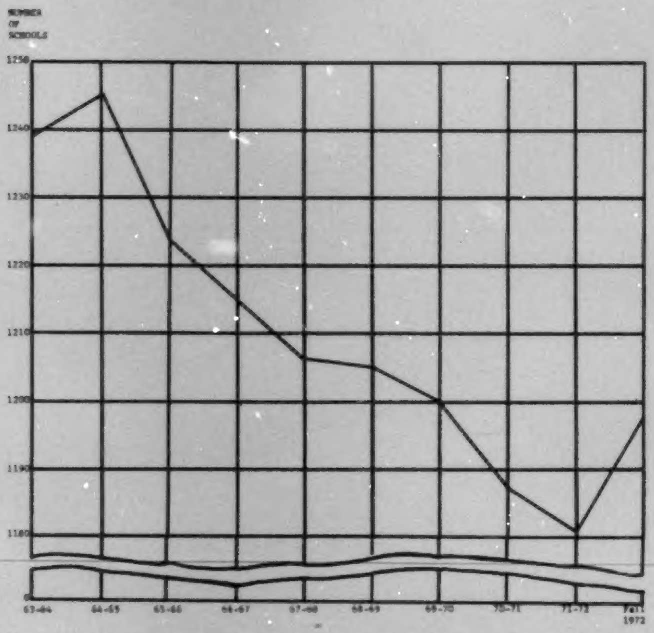
NET BONDED DEBT, COLORADO PUBLIC SCHOOLS, 1962-63 THRU 1971-72



This graph shows the net bonded debt of Colorado school districts that must be paid from a local property tax levy. General obligation bonds and refunding bonds are included. Refunded bonds are not included since they are to be paid from an escrow account established from proceeds of the sale of refunding bonds. Original general obligation bonds covered by the refunding bonds are referred to as refunded bonds.

1962-63	1963-64	1964-65	1965-66	1966-67	1967-68	1968-69	1969-70	1970-71	1971-72
$285,743,370	$297,560,328	$303,844,320	$298,810,457	$298,685,532	$315,673,226	$306,984,288	$345,822,083	$377,356,167	$434,155,678

COLORADO PUBLIC ELEMENTARY AND SECONDARY SCHOOLS, 1963-64 THRU FALL 1972

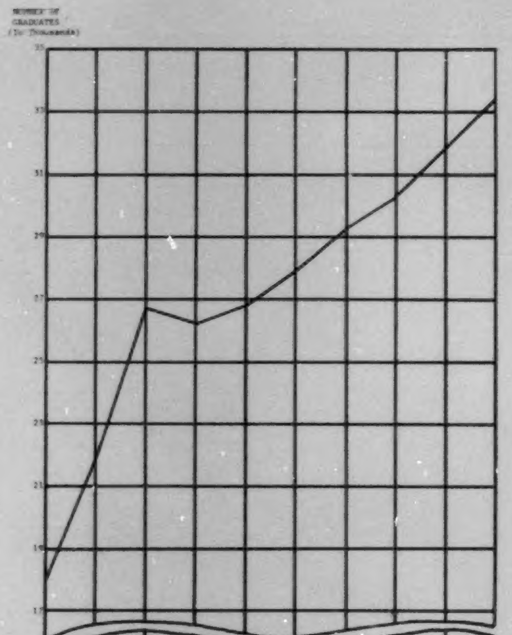


This graph illustrates the decline in the past several years in the number of Public Elementary and Secondary Schools in Colorado. However, the 1972 total increased slightly over 1971. This may be due partly to the increasing pupil membership and the limited consolidation activity during the past year

1963-64	1964-65	1965-66	1966-67	1967-68	1968-69	1969-70	1970-71	1971-72	Fall 1972
1,239	1,245	1,224	1,215	1,206	1,205	1,200	1,187	1,181	1,198

NUMBER OF COLORADO PUBLIC HIGH SCHOOL GRADUATES

1962-63 THRU 1971-72

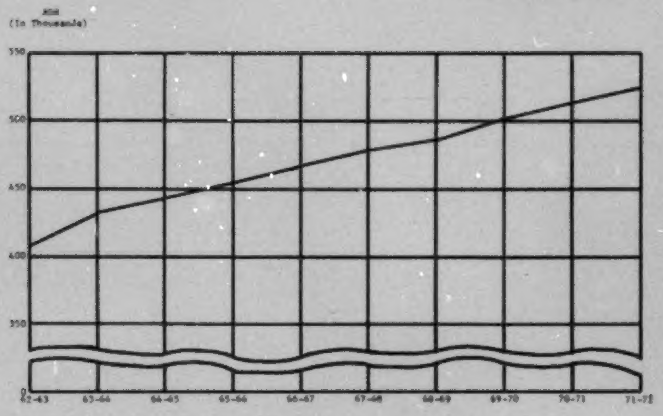


A dramatic increase of 86.9 percent in the number of Colorado public high school graduates since 1962-63 is clearly visible in this graph. Children of the so-called "baby boom era" following World War II are represented in the graph in the early 1960's.

1962-63	1963-64	1964-65	1965-66	1966-67	1967-68	1968-69	1969-70	1970-71	1971-72
17,895	21,914	26,749	26,281	26,831	27,889	29,381	30,312	31,910	33,454

PUPILS IN AVERAGE DAILY ATTENDANCE (ADA) IN COLORADO PUBLIC SCHOOLS,

1962-63 THRU 1971-72

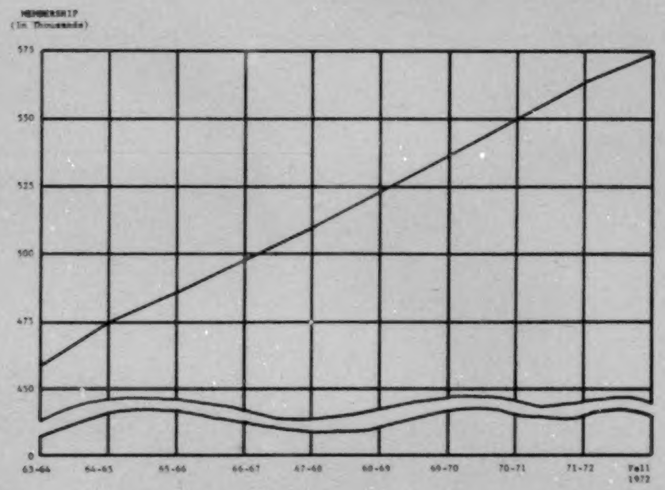


The average daily attendance (ADA) of pupils in Colorado's public schools increases in proportion to the rise in fall membership. ADA has increased 28.1 percent since 1962-63. ADA is computed by dividing the number of school days into aggregate attendance figures (sum of the days present of all pupils when school is in session). The average daily attendance increase rate will be slower in the 1970's due to the decline in the birthrate in the early 1950's.

1962-63	1963-64	1964-65	1965-66	1966-67	1967-68	1968-69	1969-70
409,813.3	431,699.8	442,905.7	454,086.7	466,420.8	478,167.8	485,975.5	500,388.4

1970-71	1971-72
512,499.3	525,127.5

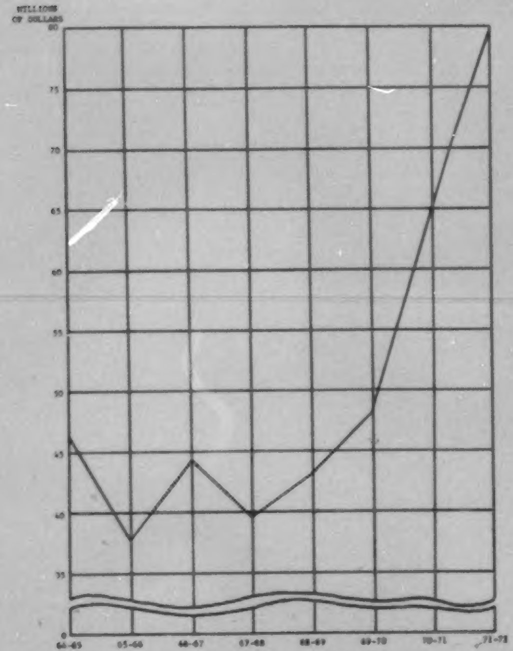
FALL PUPIL MEMBERSHIP IN COLORADO PUBLIC SCHOOLS, 1963-64 THRU FALL 1972



This graph illustrates an increase of 24.9 percent in the fall membership of pupils over a ten-year period. The information is gathered annually in early fall from each school district.

1963-64	1964-65	1965-66	1966-67	1967-68	1968-69	1969-70	1970-71	1971-72	Fall 1972
459,820	475,928	486,784	498,388	510,092	523,469	537,281	550,060	564,502	574,248

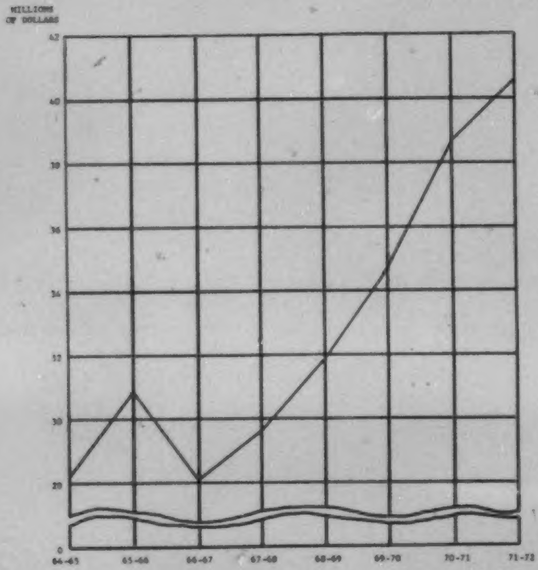
CAPITAL OUTLAY EXPENDITURES, COLORADO PUBLIC SCHOOLS
1964-65 THRU 1971-72



Capital outlay expenditures are those which result in the acquisition of fixed assets or additions to fixed assets. They are expenditures for land or existing buildings, improvement of grounds, construction of buildings, additions to buildings, remodeling of buildings, or initial or additional equipment. The chart shows annual school district expenditures for these purposes.

1964-65	1965-66	1966-67	1967-68	1968-69	1969-70	1970-71	1971-72
$46,164,508	$37,706,157	$44,389,828	$39,770,459	$43,182,316	$48,418,007	$65,305,300	$79,679,126

DEBT SERVICE EXPENDITURES, COLORADO PUBLIC SCHOOLS, 1964-65 THRU 1971-72



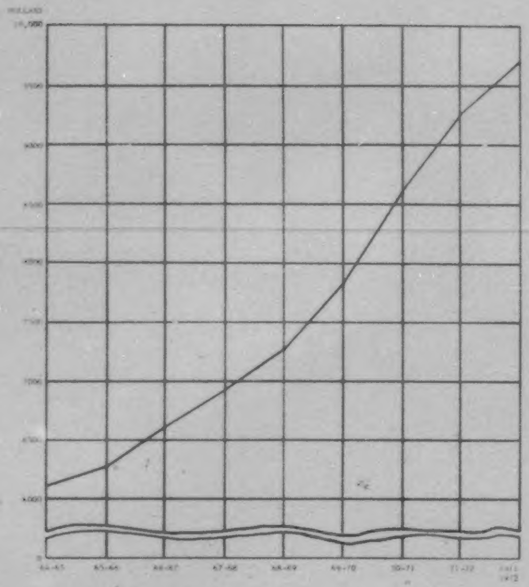
This graph shows the total annual school district expenditures for payment on principal of school district indebtedness and interest thereon. Short-term loans that are made and paid back in the same fiscal period (July 1 - June 30) are not included. However, loans made in one fiscal period and paid back in succeeding years are included in the total. Most school district indebtedness is in the form of long-term bonded or refunding debt. The decline in 1967 was partly due to issuance of refunding bonds with lower repayment rates. Interest rates being paid now are higher than those of several years ago and partly account for the steep climb in the graph.

1964-65	1965-66	1966-67	1967-68	1968-69	1969-70	1970-71	1971-72
$28,395,848*	$30,813,956*	$28,185,803*	$29,613,452*	$31,926,169*	$34,621,247*	$38,648,474*	$40,454,577*

* Includes retirement of bonds and interest paid from current tax money. Does not include payment made from refunding bond escrow accounts for retirement of refunded bonds and interest on refunded bonds.

AVERAGE SALARIES OF CLASSROOM TEACHERS IN COLORADO PUBLIC SCHOOLS,

1964-65 THRU FALL 1972

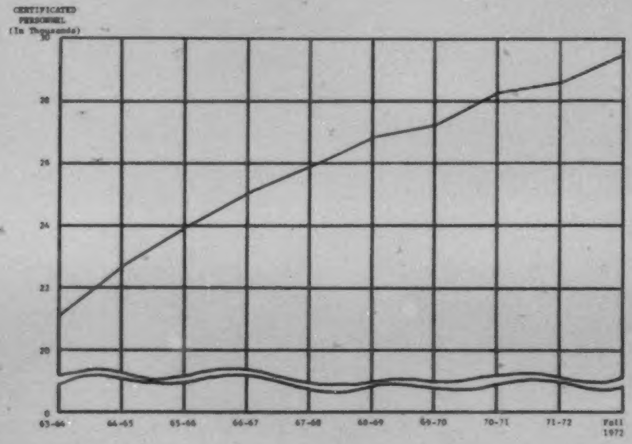


As shown in this graph, the average teacher salary continued to increase in 1972, although the percentage was lower than in the past few years. One primary contributing factor to this slower rate was the computation of the average figure. Only full-time classroom teachers were used in the 1972 figure. This was a change from past years when individuals that also had administrative duties were included. Another factor affecting this rate of increase was a slight increase in teacher turnover in 1972 over that in the previous year.

1964-65	1965-66	1966-67	1967-68	1968-69	1969-70	1970-71	1971-72	Fall 1972
$6,119	$6,337	$6,624	$6,928	$7,264	$7,813	$8,614	$9,264	$9,666

CERTIFICATED PERSONNEL IN COLORADO PUBLIC SCHOOLS, 1963-64 THRU FALL 1972

(FULL TIME EQUIVALENT)



This graph illustrates an increase of 36.2% in certificated personnel in the public schools since 1963-64. Certificated personnel are persons employed in professional positions requiring legal certification to teach, administer, supervise, or direct in the instructional programs of a school district.

1963-64	1964-65	1965-66	1966-67	1967-68	1968-69	1969-70	1970-71	1971-72	Fall 1972
21,597.6	22,782.4	23,997.8	25,014.8	25,991.3	26,893.7	27,298.3	28,349.7	28,572.3	29,405.2

PROFILES

This part of the Consolidated Report is designed to present basic information about each school district in a statistical form.

Facts about each district are compared with state averages and with a group average. Grouping of districts was made by size based on Fall 1972 membership.

All information in the profiles, except mill levies, was selected and computed from data regularly provided by school districts to the Department of Education.

Profiles are shown for each district, each group of districts, and the entire state.

PROFILE ORGANIZATION

Basic information is shown at the top of the profiles for the total state, each group, and each school district. Selected financial, staff and pupil data which can be compared to the state average and the average for the group is shown in the middle of the profile. Achievement Test Results information is shown at the bottom of each district profile.

In order to portray the deviation from the state average on a common scale, the district average was subtracted from the state average and then the difference was divided by the state average to determine the percent deviation.

Each item must be analyzed to determine if an above average deviation or a below average deviation has a good or bad connotation. In some items a below average deviation may indicate a better than average condition whereas for other items the reverse would be true.

Additional information concerning school districts is available in statistical reports issued annually by the Colorado Department of Education.

PROFILE DEFINITIONS

Headquarters County: The county in which the administration offices of the district are located.

Other Counties: Counties other than the Headquarters County which are partially included in the district boundaries.

District: Legal and common names of the district.

Number of Schools: The total number of units (elementary, junior and senior high) operated by the district. Source: Information Sheets for the Colorado Education Directory, Form 116A.

Fall Membership: Total pupil membership of the district as of approximately October 1. Source: Fall Report from School Districts, CDE Form 4.

Average Daily Attendance: The sum of days present (actually attended) of all pupils in the district divided by the number of days school was in session. Source: Annual Report of Pupil Membership and Related Information, CDE Form 2.

Number of Graduates: Number of students who graduated from high school last school year. Source: Annual Report of Pupil Membership and Related Information, CDE Form 2.

Number of Certificated Personnel: The total number of personnel as of approximately October 15 in the district who are employed in professional positions requiring legal certification to teach, administer, supervise or direct in the instructional program of a school district. Source: Certificated Personnel Form CP-1.

Total Expenditures: All charges incurred for all funds (current expenses, capital outlay, and debt service). Source: District's Annual Financial Report, CDE Form 3.

Accreditation Status: The status of the school districts are determined by the Colorado Department of Education in relationship to minimum educational standards, i.e., accredited, accredited-warned, accredited-probation, and non-accredited.

FINANCIAL

Assessed Valuation per ADA: The assessed valuation of the district as certified for 1972 taxes by the Colorado Tax Commission, divided by the pupil average daily attendance. Sources: 1st Annual Report of the Division of Property Taxation of the Colorado Tax Commission and Pupil Attendance and Related Information Report, CDE Form 2.

Total Mill Levy: The tax rate for the school district certified by the Colorado Tax Commission. Source: 1st Annual Report of the Division of Property Taxation of the Colorado Tax Commission.

Note: Average mill levy is shown on the state and group profiles. The state average is from the 1st Annual Report of the Division of Property Taxation of the Colorado Tax Commission. The group averages are developed by dividing the total revenues for school purposes by the total assessed valuation of the districts included in the groups.

Local and County Revenue per ADA: District and county revenue for school purposes, divided by pupils in average daily attendance. Source: District's Annual Financial Report, CDE Form 3.

State Revenue per ADA: Revenue received by the district from the state, divided by pupils in average daily attendance. Source: District's Annual Financial Report, CDE Form 3.

Federal Revenue per ADA: Revenue received by the district from the federal government, divided by pupils in average daily attendance. Source: District's Annual Financial Report, CDE Form 3.

Total Revenue per ADA: The sum of all local, state, and federal revenue received by the district, divided by pupils in average daily attendance. Source: District's Annual Financial Report, CDE Form 3.

Current Expenses per ADA: The sum of all expenses of the general fund except community services, capital outlay, and debt service, plus fixed charges of all other funds and replacement of equipment in the capital reserve fund, divided by pupils in average daily attendance. Source: District's Annual Financial Report, CDE Form 3.

STAFF

Administrative Turnover Rate: The rate, expressed as a percent, at which personnel classified as administrators (those whose primary function is general administration or school management) leave or separate from the district during the school year. Source: This rate is determined by comparing Certificated Personnel, CP-1 Forms sent to the Colorado Department of Education in the fall, against those sent the previous fall.

Classroom Teacher Turnover Rate: The rate, expressed as a percent, at which personnel whose primary function is classroom teaching leave or separate from the district during the school year. Source: This rate is determined by comparing Certificated Personnel, CP-1 Forms sent to the Colorado Department of Education in the fall, against those sent the previous fall.

Average Salary Professional Staff: The total annual salary of the district's certificated staff, divided by the Full Time Equivalency (FTE)* of the staff. Source: Certificated Personnel, CP-1 Forms.

* Two part time personnel, employed ½ day each, would be a FTE of 1 person (2 X .5 FTE = 1.0 FTE).

Average Salary Classroom Teacher: The total annual salary of the certificated personnel whose function is classroom teaching, divided by the FTE of classroom teachers. Source: Certificated Personnel, CP-1 Forms.

Percent Certificated Staff with Masters Degree or Beyond: The percentage of the total certificated staff who have Masters Degrees, Masters plus additional hours, Education Specialist, or Doctorates. Source: Certificated Personnel, CP-1 Forms.

Pupil/Teacher Ratio: This is the number of pupils in membership as of approximately October 1, divided by the full time equivalency of classroom teachers. Sources: Fall Report from School Districts, CDE Form 4 and Certificated Personnel, CP-1 Forms.

PUPIL

Percent Change ADA 1961-62 to 1971-72: The difference between average daily attendance in 1961-62 and 1971-72 divided by the average daily attendance in 1961-62. This indicates the percentage of increase or decrease of average daily attendance over the 11 years. Source: Annual Report of Pupil Membership and Related Information, CDE Form 2.

Projected Dropout Rate: Expected percentage of 7th grade students who will not graduate from high school with their class if conditions remain the same. Source: Annual Report of Pupil Membership and Related Information, CDE Form 2.

Achievement Test Results: The average district scores of group achievement tests administered to selected grades during the 1969-70, 1970-71, and 1971-72 school years. Results for individual schools and an explanation of the data contained in each column is given in the section of this publication titled Group Achievement Test Results.

DISTRICT GROUPS

Following are the six groups and the districts in each:

GROUP 1. Fall 1972 Membership 1 - 299

Alamosa	Re-22J	Sangre de Cristo
Arapahoe	26J	Deer Trail
Baca	RE-3	Pritchett
Baca	RE-5	Vilas
Baca	RE-6	Campo
Bent	Re-2	McClave
Cheyenne	R-1	Kit Carson
Cheyenne	R-3	Arapahoe
Costilla	R-30	Sierra Grande

SELECTED INFORMATION

ORGANIZATION

The report is arranged alphabetically by county. Within each county, the districts are arranged by legal number and the schools are listed alphabetically by high school, junior high school, and elementary school within each district.

DESCRIPTION OF ITEMS

County, District and School: County name, legal district name, and name of school.

Grade Span: The grade levels included in each school.
K = Kindergarten.
1 thru 12 = First through 12th grades.

Fall 1972 Membership: Total pupil membership of each school and the entire district as of approximately October 1. Source: Fall Report from School Districts, CDE Form 4.

Pupil/Teacher Ratio: Fall 1972 membership divided by the full time equivalency of classroom teachers. Ratios are shown for each school total district and the entire state. Sources: Fall Report from School Districts, CDE Form 4 and Certificated Personnel, CP-1 Forms.

The ratios shown for individual schools may be substantially in error because of one or more of the following factors:

1. Failure to report one or several teachers on the Certificated Personnel, CP-1 Forms. This would substantially affect a small school.
2. Teachers assigned to more than one school are not shown as part of the staff at the schools they service. In some instances this could cause no pupil/teacher ratios to be shown for an individual school.
3. As kindergartens sometimes have 1, 2, or 3 sections, the staffing for them varies appreciably and an individual school's ratio may be distorted significantly. This is particularly true in the case of a school that has kindergarten only. In this case, if they only have ½ day sessions, the pupil/teacher ratio shown will be double a normally computed ratio.

Another factor to consider in utilizing pupil/teacher ratios as a measure of instructional capability is the great variability of staffing patterns. The utilization of teacher aides, counselors, and other instructional support personnel must be considered in evaluating the overall instructional personnel resources per pupil.

Courses Offered: This is a count of courses offered by any school having any grades 7 through 12. Source: Fall Report from School Districts, CDE Form 4.

In comparing the number of courses offered by individual schools, it must be noted that courses can vary as follows:

1. Length of course in minutes per session.
2. Number of sessions per week.
3. Length of time the course is offered, such as for a quarter, semester, or entire school year.
4. Courses having only one or a few sections as compared to many sections. Thus the number of courses offered could be greatly inflated if there are many one-section courses for special purposes.

Projected Dropout Rate (%): This is the expected percentage of the students in the lowest grade of a school, including any grades 7-12, who will not complete the highest grade of the school with their class if conditions remain the same. It is reported for each secondary school, the entire school district, and the total state. Source: Annual Report of Pupil Attendance and Related Information, CDE Form 2.

Caution should be exercised in considering the dropout rate for small schools as one or two dropouts can substantially change the projected dropout rate for that school.

Additional dropout information is reported annually by the Community Services Unit of the Colorado Department of Education.

GROUP ACHIEVEMENT TEST RESULTS

GENERAL COMMENTS ON GROUP ACHIEVEMENT TEST RESULTS FOR 1971-72 SCHOOL YEAR

Since there is no uniform statewide testing program in Colorado, the group tests administered by the school districts during the 1971-72 school year vary from district to district and from school to school.

To comply with the requirements of 123-1-13(1) Colorado Revised Statutes as amended, Colorado Department of Education requested a report of the median scores[1] on these group achievement tests in the fields of reading and mathematics for grades 3, 6, 9 and 12. Districts were requested to report median grade equivalent scores for grades 3 and 6, and to report median precentile[2] scores for grades 9 and 12. In cases where the testing program and scoring procedures in a particular district were such that the data requested were not available, the district furnished such information as was available. For example, if grade 3 information was not available, but results for grade 2 were available, then grade 2 results were reported. In some districts, tests were scored by a testing service bureau and were available in percentile scores only, rather than grade equivalent scores.

In complying with the requirements of CRS 123-1-13 to furnish information regarding the quality of education in Colorado, the Colorado Department of Education is aware of the disadvantages of reporting quality of education by average scores on standardized achievement tests. These disadvantages are discussed below.

Standardized tests are constructed for the purpose of discriminating among the various students taking the test; therefore, an item which could be answered by all or nearly all students would not be included in the test. Thus, the standardized tests fail to indicate common areas of achievement but, rather, distinguish among individuals on the basis of their differences in achievement. Further, reporting average scores for the groups of students obscures individual achievement.

---

[1] The median score is the middle score which has an equal number of scores above and below it.

[2] A percentile is defined as a point on the distribution below which a certain percent of the scores fall. For example, the 40th percentile is the point below which 40 percent of the scores in the distribution fall. This does not mean that the student who scores at the 40th percentile answered 40 percent of the items correctly. He may have answered correctly 76 questions on a reading test composed of 100 items. If this score is equivalent to the 40th percentile, it means that 40 percent of the students who took the test received a score below 76.

Although standardized tests may give an indication of the accomplishments of individual students, they are only one measure of the quality of education or the extent of learning of students. There is a broad range of achievements which were attained by all students which has been excluded from the tests.

Each school selects the tests of their choice. However, as Table 1 indicates, the majority of schools use either the Stanford Achievement Test or the Iowa Tests (Test of Basic Skill or Test of Educational Development). The Iowa tests are used more by the smaller districts, and the Metropolitan or California Test of Basic Skills are used more by larger districts.

The methods employed in obtaining the data published were not designed to satisfy the requirements of a scientific study; however, results reported represent a large proportion of the school population. Some comparisons have been made among districts utilizing the same test at the same grade level for the 1971-72 school year with the recognition that these tests were administered during different months of the school year. The samples analyzed cannot be considered a representative sample of the state, but may be suggestive of trends. Since the Stanford and Iowa tests were in most common use, the analysis which follows is based on these three instruments.

READING ACHIEVEMENT

Reading scores were reported in decile ranges from some districts. Table 2 illustrates decile ranges and gives the numbers of students scoring in each decile for the three tests, the Iowa Test of Basic Skills, the Iowa Test of Educational Development and the Stanford Achievement Test. A decile is the percentile score from 0-99 divided into ten groups (0-9, 10-19,..., 90-99). Approximately 10 percent of the scores are expected to fall in each decile. The greatest achievement is indicated in the 90-99th percentile.

These results are reports of individual students and do not indicate the average scores of the school. Instead, these figures represent the percent of the total number of students who scored within each decile for the particular achievement test reported. Based upon the performance of the students selected for the norming group, approximately 10 percent of the scores are expected to fall in each decile.

Table 2 indicates that students in grades 3 and 6 in Colorado scored higher than the national average on the Iowa Test of Basic Skills. In general, less than ten percent of the students reported scored in the deciles below 50 percentile and more than ten percent scored in each of the deciles above 50 percentile.

Colorado students in grades 8 through 12 scored, on the reading portion of the Iowa Test of Educational Development, just about at the national average.

The Stanford Reading Achievement Test is reported for more students than any other test in the third grade. The results, as shown in Table 2, indicate that Colorado students fall below the national norms on this particular test.

The percent of students who tested at or above the 50th percentile or at or above grade level on the Iowa and Stanford reading tests are shown in Figures 1 and 2. The equivalent figures are displayed for the years 1969-70, 1970-71 and 1971-72. The change in achievement over time shown in Figures 1 and 2 must be interpreted with caution since the students represented are not a random sample of the state and contain unknown sample biases that may vary from year to year. However, as may be seen, achievement over the three year period has not shown growth relative to national norms. Furthermore, the older students are, if anything, achieving less well than the younger students. The state Reading Achievement Act currently being implemented is planned to improve the reading skills levels in the state.

An analysis was run asking whether district reading achievement levels in the third grade varied by size of district. The proportion of districts showing reading achievement at or above grade level or the 50th percentile was calculated for each of the district size groupings shown on pages 15 - 19. Separate analysis of the Iowa Test of Basic Skills, the Stanford Achievement Test, and all tests combined showed there was no significant difference between district size category and the proportion of districts showing reading achievement above the norm in the third grade. A district summary achievement score is not a strong measure of reading achievement, therefore the above analysis should be considered only as suggestive.

MATHEMATICS ACHIEVEMENT

Grade equivalent results, by school and by district, were reported by the districts. The same pattern of reporting used in the Consolidated Reports for the past couple of years is continued in the present report. The tests summarized in Table 3 are the Iowa Test of Basic Skills and the Stanford Achievement Test for grades 3 and 6, and the Iowa Test of Educational Development and the Stanford Achievement Test for grades 8 - 12.

In general, the conclusion from Table 3 is that Colorado students compare well in mathematics with national norms in the primary grades, score at or below national norms by the 6th grade, and regain a more favorable comparison status by high school. The differences between the Stanford and Iowa mathematics test results reflect the problem of comparing across tests with different norms, different items, different skills, different student samples, and different test administration dates.

A three year comparison of the same kind of data as shown in Table 3 is displayed in Figures 3 and 4. The rather dramatic fluctuations from year to year shown in some grade levels makes the validity of the data suspect. There is a consistent fall-off in grade 6 mathematics achievement levels compared with grade 3 for each of the years 1969-70, 1970-71 and 1971-72. The 1971-72 levels are, in general, below the 1970-71 levels, but probably should be considered sampling and testing fluctuations rather than a time trend.

Table 1: Mathematics Achievement Tests Administered
In Colorado School Districts[a]
1971-72 School Year

	Percent by Grade							
	3rd Grade		6th Grade		8th-9th Grade		11th-12th Grade

EXPLANATION OF SCHOOL ACHIEVEMENT TESTS SUMMARY REPORTS

The data for the school years 1969-70, 1970-71 and 1971-72 are presented in the accompanying tables. The data are arranged by county, district and school for the school summary.

An explanation of the column headings is as follows:

Subject: Since there is no uniformity of testing programs and procedures among school districts, the decision was made to limit the reporting to the subject areas of reading and mathematics.

Year: Data are listed as reported from local school districts for the 1969-70, 1970-71 and 1971-72 school years.

Test: Among the various tests administered by the districts and schools within the districts were the following:

I. Achievement Batteries:

ACT	American College Test
CAT	California Achievement Test
COMP	Comprehensive Test of Basic Skills
CPT	Cooperative Primary Test
CTBS	California Test of Basic Skills
ESS	Essential High School Content Battery
EVPA	Every Pupil Achievement
ITBS	Iowa Test of Basic Skills
ITED	Iowa Test of Educational Development
MET	Metropolitan Achievement Tests
NEDT	National Educational Development Test
SCA	Cooperative School and College Ability
SHSP	SRA High School Placement
SRA	Science Research Associates National Development
STEP	Sequential Tests of Educational Progress
STAN	Stanford Achievement Test
TAP	Test of Academic Progress
WRAT	Wide Range Achievement Test

II. Single Subject Achievement Tests:

CRT	California Reading Test
DR	Diagnostic Reading
DORT	Doren Diagnostic Reading
GPRT	Gates Primary Reading Test
ISR	Iowa Silent Reading
LCD	Lyons Carnahan Developmental Reading
NRT	Nelson Reading Test
PRP	Primary Reading Profiles

III. Scholastic Aptitude Tests:

CTMM	California Test of Mental Maturity
DAT	Differential Aptitude Test
PSAT	Preliminary Scholastic Aptitude Test
SCAT	Scholastic Competence and Aptitude Test

Grade Tested: In an effort toward uniform reporting, test results were requested for grades 3, 6, 9 and 12, when available; however, many districts did not administer tests at these grade levels and had to furnish data for other grades. A few districts reported grade ranges, such as 1-3, 4-6, etc., rather than a single grade. Since this reporting was inconsistent with data received from other districts, it was omitted.

The responses to the national norms used varied too widely for uniform treatment; therefore, the actual grade placement was determined by the month the test was administered. The actual month was translated into a decimal equivalent as follows:

.0	September	.5	February
.1	October	.6	March
.2	November	.7	April
.3	December	.8	May
.4	January	.9	June

If the sixth grade reading test were administered in February, the actual grade placement would be 6.5; however, if the test were administered in September, the actual grade placement would be 6.0.

Obtained Score: The median score in grade equivalent was requested for elementary grades, and the median percentile score was requested for secondary grades. Time restrictions and other limitations prevented many districts from furnishing information in the form requested. For example, many districts were unable to furnish a median score but submitted a mean score[1] instead. When the grade equivalent score was unavailable, the percentile rank was substituted and conversely. Some districts were unable to furnish an average percentile rank and substituted a percentile band (a range of percentile scores for example, 48-63). Those districts which reported average percentile ranks of 100 or above were in error and, therefore, omitted. In such instances, the summary report will read "Data Received in Incomparable Form."

The obtained score, then, represents the average score reported by the local school district expressed either in grade equivalent score or percentile and subject to the aforementioned modifications.

Difference: Entries in this column represent the difference between grade score equivalent and actual grade placement, where grade equivalent scores were reported or the difference above or below 50 percentile where percentile scores were reported.

---

[1] A mean score is the sum of the individual scores divided by the total number of individuals included.

DEFINITIONS

RECEIPTS AND TRANSFERS

LOCAL REVENUES (Including County)

In a typical school district, about ninety five percent of the revenues shown in this column come from a district property tax levy. Other sources of local revenue include specific ownership (primarily automobile and mobile home tax), student fees, and tuition and transportation fees.

STATE REVENUES

These are revenues received by local districts from the State General Fund. Equalization payments constitute the major portion of the amount shown for most districts. Other of state revenues include money for pupil transportation, vocational education, and other categorical programs.

FEDERAL REVENUES

Revenues coming to school districts from the federal government either directly or through the state are recorded under this heading, aside from amounts received for federal impaction (P.L.874 and P.L.815) all federal revenues are categorical.

This column does not include federal money or commodities received for school lunch programs.

NON-REVENUE RECEIPTS

Amounts received which must be paid back at some future date are called non-revenue receipts. Also included in this definition are receipts received from sale of property (sites, building, or equipment) that were previously purchased, and proceeds from insurance adjustments.

The largest single source of non-revenue receipts are those monies received from the sale of general obligation bonds which were authorized at a bond election. Non-revenue receipts are used primarily for capital outlay expenditures.

IN-COMING TRANSFERS

Monies that have accrued to a district but have been transferred from another school district for tuition and transportation fees to cover the local expenditures required to educate pupils that attend school in a district other than the district of residence.

EXPENDITURES BY FUND

GENERAL FUND

This is the operating fund of the district. Any legal school district transfers may be made from this fund. However, good management practice dictates that expenditures for long term debt service (principal and interest) and expenditures for large building projects be made from other funds provided for those purposes.

BOND REDEMPTION FUND

Expenditures for payment of interest and principal of long term bonded debt are made from this fund. It cannot be used for any other purpose.

BUILDING FUND

This fund is used as a clearing account for major capital outlay projects. There is no tax levy for this fund. It receives its receipts from sale of bonds of federal funds (primarily P.L.815) provided for major building projects.

CAPITAL RESERVE FUND

This is the only fund in which school districts may accumulate monies over a period of years. The levy is limited to two mills annually. Expenditures from this fund are regulated by law, and may be made for certain capital outlay or replacement items only.
